

ABSTRACT

An electrode for an energy storage device containing a polyaminoquinoxaline compound of the following formula (1a) is provided as having a highly densified energy level and being small in size and light in weight.

R¹ and R² independently represent a hydrogen atom, a hydroxyl group, a C₁-C₁₀ alkyl group, a C₁-C₁₀ alkoxy group or the like, R³ and R⁴ independently represent a hydrogen atom, a halogen atom, a cyano group, a nitro group, an amino group, a C₁-C₁₀ alkyl group, a C₁-C₁₀ alkoxy group or the like, X¹ represents -NH-R⁵-NH- or -NH-R⁶- wherein R⁵ and R⁶ independently represent a C₁-C₁₀ alkylene group, -C(O)CH₂-, -CH₂C(O)- or the like, and n is an integer of 2 or over.
